Table 1. Pavement Condition Summary for Inyo County Roadways.....7  
Table 2. Breakdown of County of Inyo Network by Maintenance District.....7

## Background

In 2009, NCE was contracted to implement a Pavement Management Program (PMP). This program was managed by NCE from 2009 through 2019. Inyo County covers a large diverse geographic area and is responsible for the maintenance of approximately 512 centerline miles of road. The PMP is a valuable tool in the tracking of the county paved road network and evaluation of the future condition of our roadway system. Inyo County utilizes the MicroPaver Pavement Management System to manage our road network.

As part of the implementation of the PMP, NCE developed a MicroPaver database containing all roads within the jurisdiction of Inyo County. NCE updated the MicroPaver database yearly by collecting pavement condition data on approximately one third of the road network each year. This has been performed to monitor the impact of pavement deterioration and effectiveness of maintenance and rehabilitation activities as well as to determine a pavement condition index (PCI).

In 2020, The County of Inyo Public Works Department decided to bring the PMP in house and dedicate staff to its continued implementation. In June of 2021, Inyo County Public Works staff attended an online training through Colorado State University to further our understanding of the MicroPaver software that is critical to the continued success of the PMP.

## Inyo County Pavement Condition Index (PCI)

The PCI is a measurement of the pavement grade or condition that ranges from 0 to 100. A newly constructed or overlaid road would have a PCI of 100, while a failed road would have a PCI of 10 or less. Figure 1 is an overview of the PCI categories. The very poor to failed is represented as 0 to 25, Poor is 25 to 55, Fair is 55 to 70 and Good to Excellent is 70 to 100. The Inyo County Average PCI is 57.9 this year after data collection.

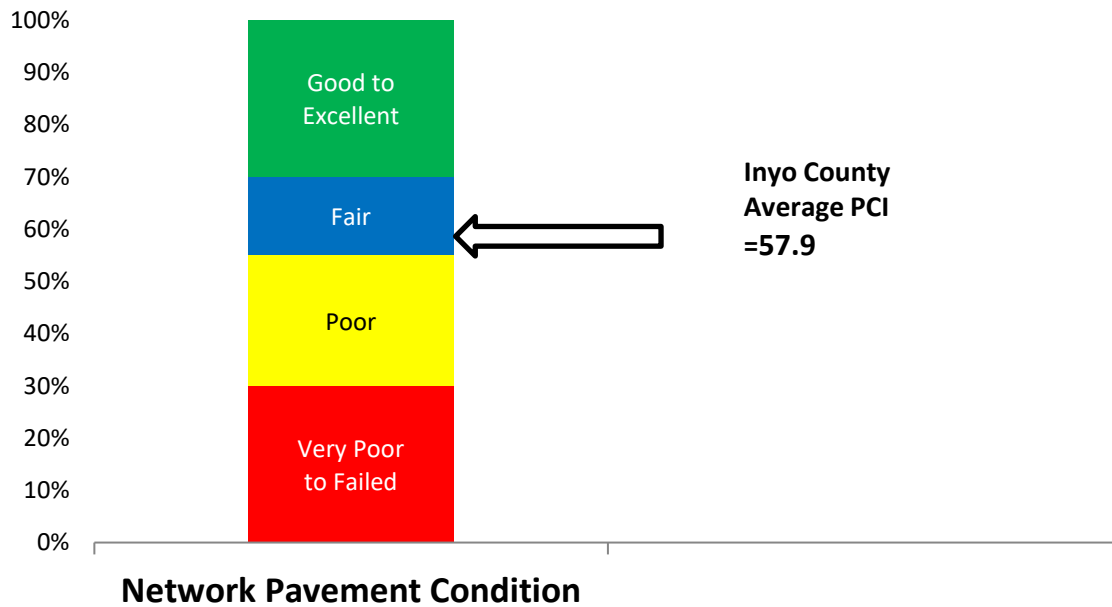

Figure 1 PCI Condition Categories

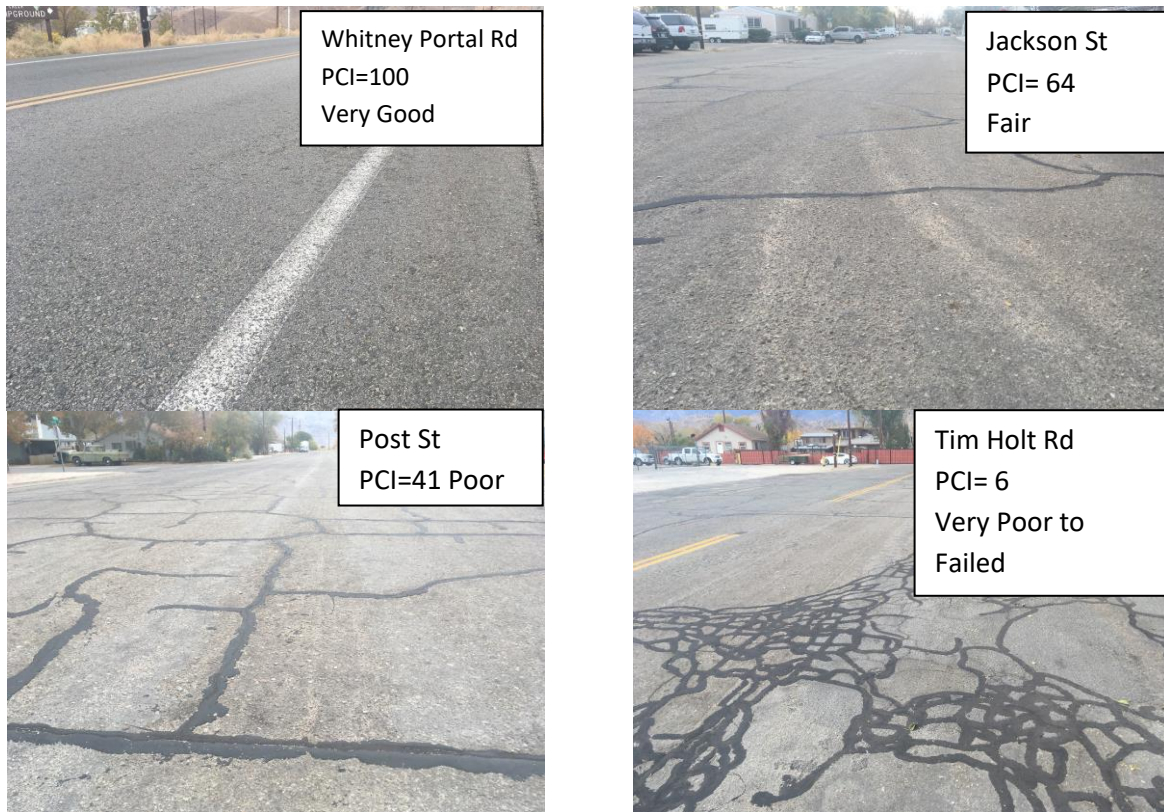

Figure 2 Examples of streets from the district 4 area

The condition survey was conducted in June and July 2021 and included a survey of 358 road sections. After the survey was completed, the pavement condition data was entered into the MicroPaver PMS database, and a PCI was calculated for each section.

In this process, the PCI of the roads start at 100 (no distress) and deduct values are applied based on the existence of present distresses. Deduct values are determined for each distress and act as a weighting factor to reflect the impact on the structural integrity and pavement surface condition. Assigned deduct values for each distress type, extent, and severity, are determined automatically by MicroPaver when input for each branch section.

Table 1 summarizes the condition of the pavement network according to pavement condition category. As you can see, approximately 47.5% on Inyo County's roadways fall in the fair to poor range. Approximately 10.5% percent of the network falls into the very poor to failed range and 42.0% percent of the network is in the good to excellent category.

**Table 1. Pavement Condition Summary for County of Inyo Roadways (2021)**

Condition Category	(PCI) Range	Percent Area Of Roadways 2021
Good To Excellent	71-100	42.0
Fair	56-70	21.0
Poor	26-55	26.5
Very Poor to Failed	0-25	10.5

Table 2 summarizes the PCI and percent for each maintenance district for 2021.

**Table 2. Breakdown of County of Inyo Network by Maintenance District (2021)**

Maintenance District	Percent Area Of Roadways	Average PCI 2021
District 1	27.0	68.2
District 2	17.0	64.8
District 3	16.5	61.6
District 4	30.0	48.9
District 5	8.5	48.1

## Conclusions

This year, Inyo County's overall network area-weighted **average PCI is 57.9**, which falls in the (Fair) condition category.

## Recommendations

The Inyo County Public Works Department recommends:

- Continue to update the pavement management system (by way of pavement condition, M&R activities) to maintain an accurate representation of our road network
- Continue current preventive maintenance strategies as aggressively as possible.
- Consider M&R alternatives that will (stretch the maintenance dollar) such as rubberized seals or micro surfacing.

## Appendix

### Section Inventory and PCI Report

#### (Sorted by Branch ID and Section ID)

This report lists a variety of section description information and the PCI of each of Inyo County's pavement sections. It lists the street (branch) section ID, use, functional class (rank), number of lanes, true area, date at last inspection, age at last inspection and PCI.

Note:

Rank: or functional class, A, B, C, D, or E.

- A. - Rural Arterial
- B. - Urban Collector
- C. - Rural Major Collector
- D. - Rural Local
- E. - Rural Minor Collector
