

Why Masks Matter

Normal breathing, talking, and coughing...

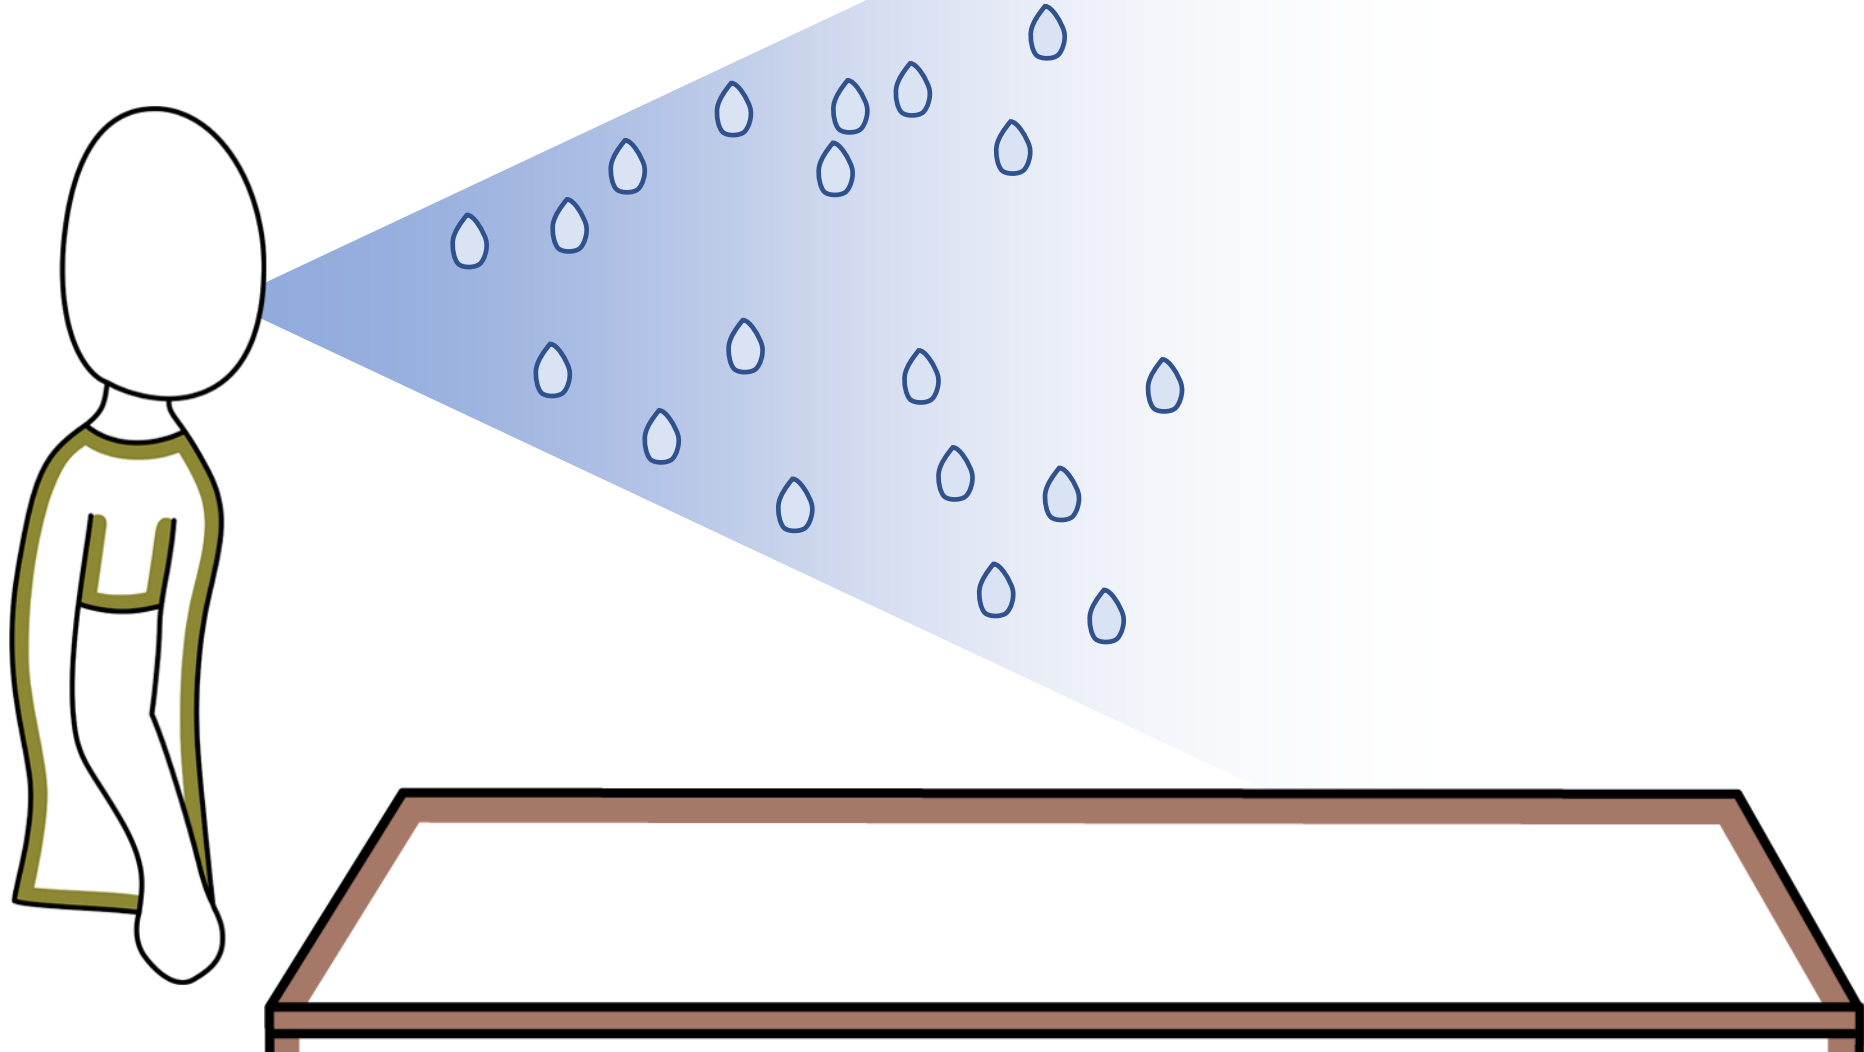

The droplets can travel...

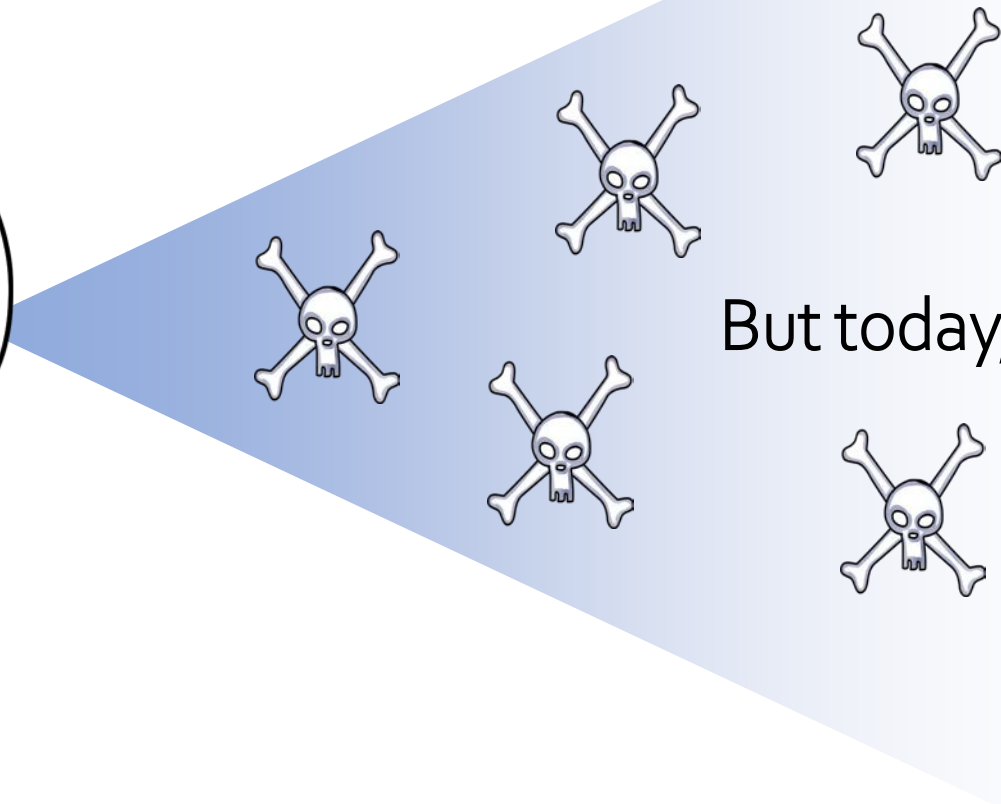

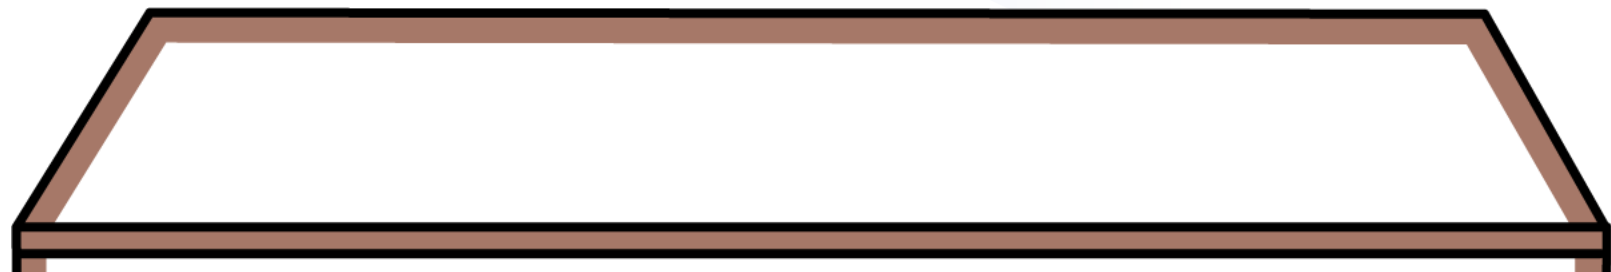

6 Feet (or more)...

and land on surfaces.

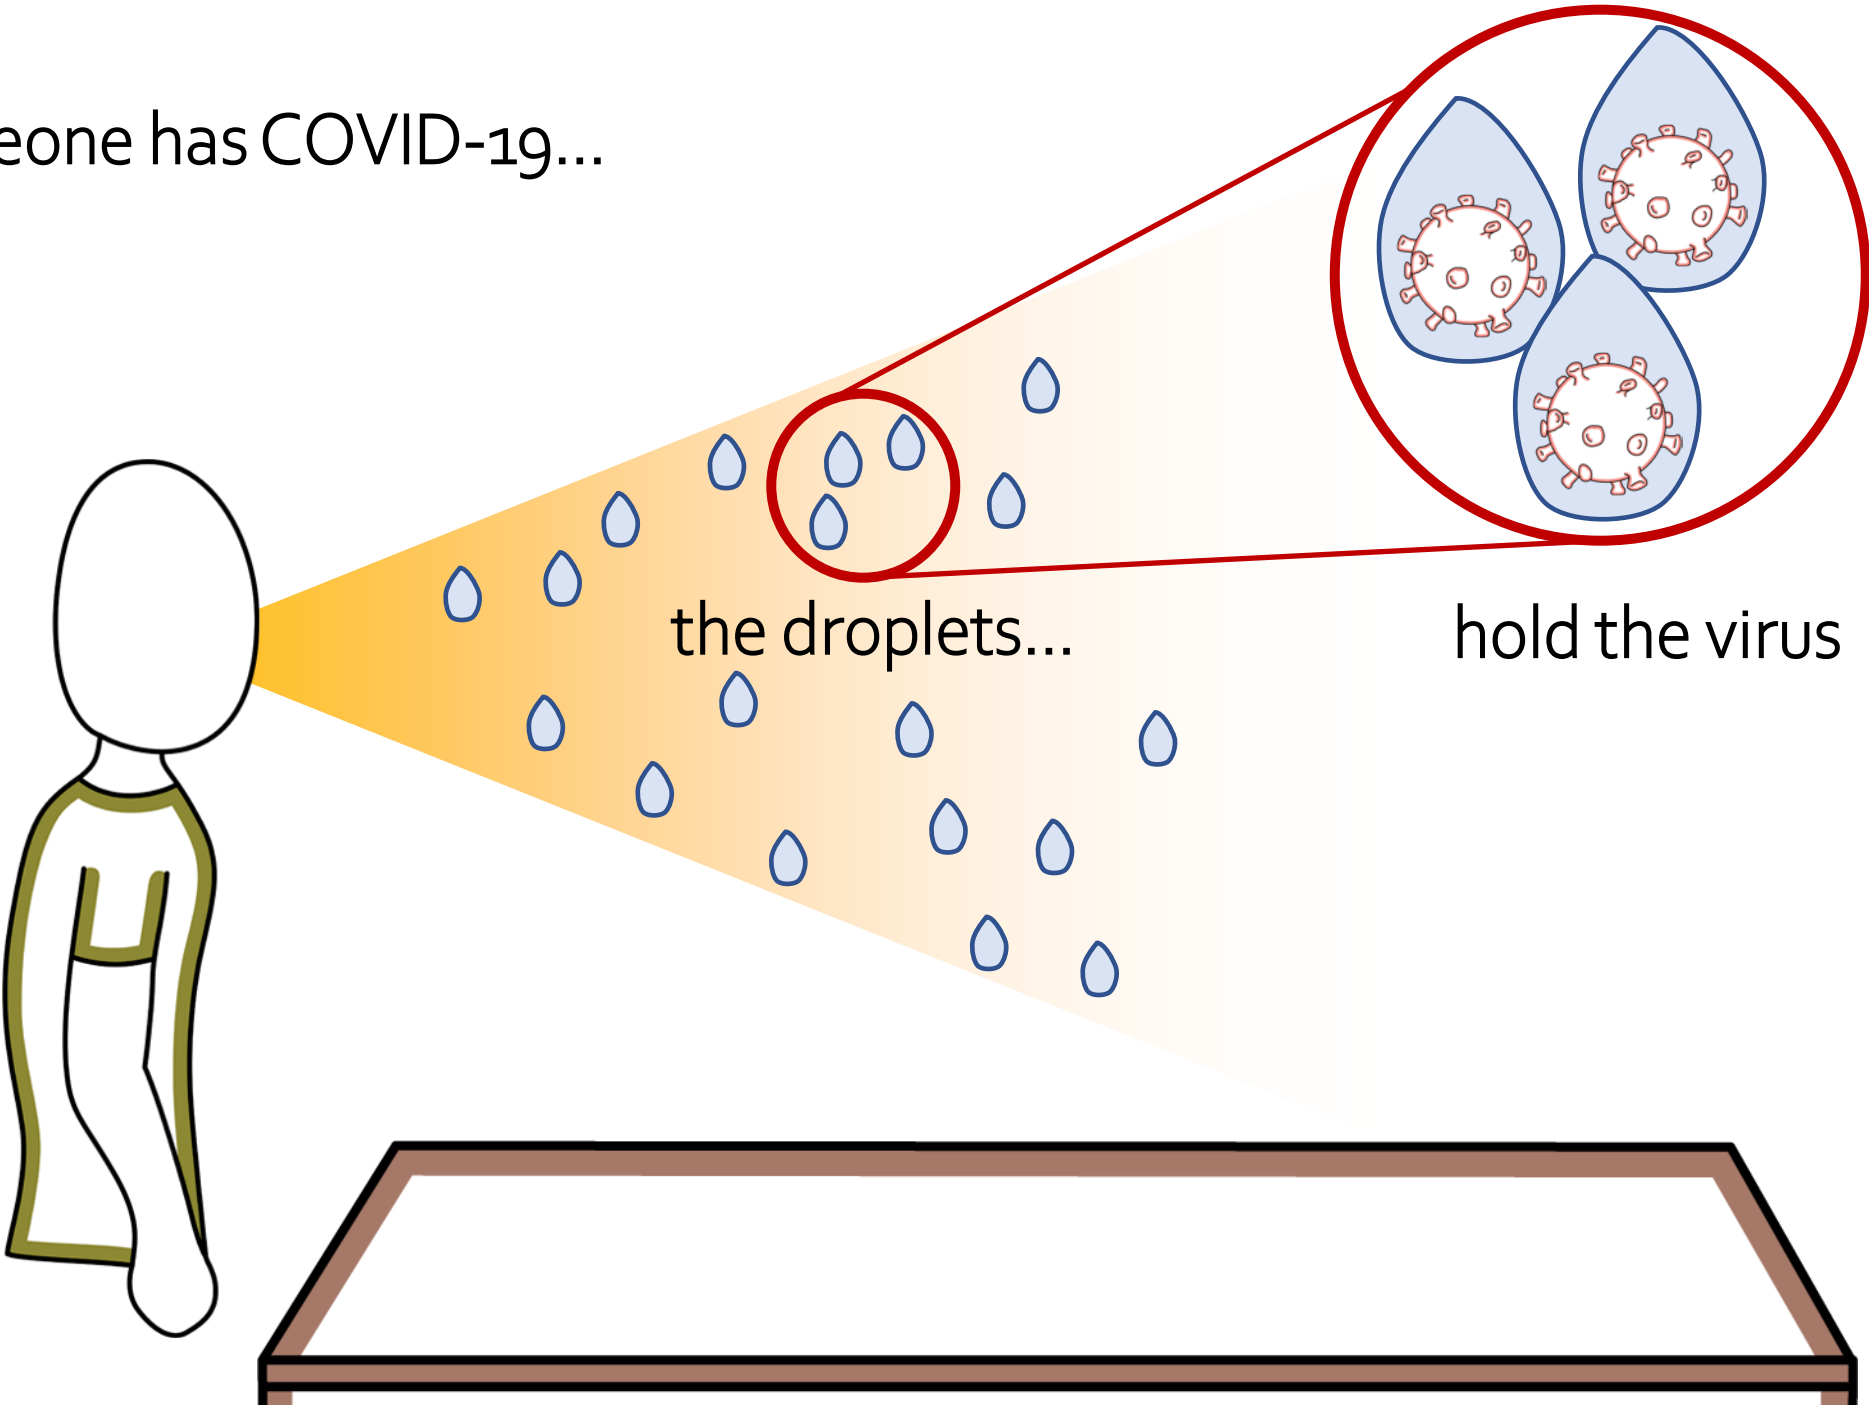

And normally that's not a problem.

But today, it can be deadly.

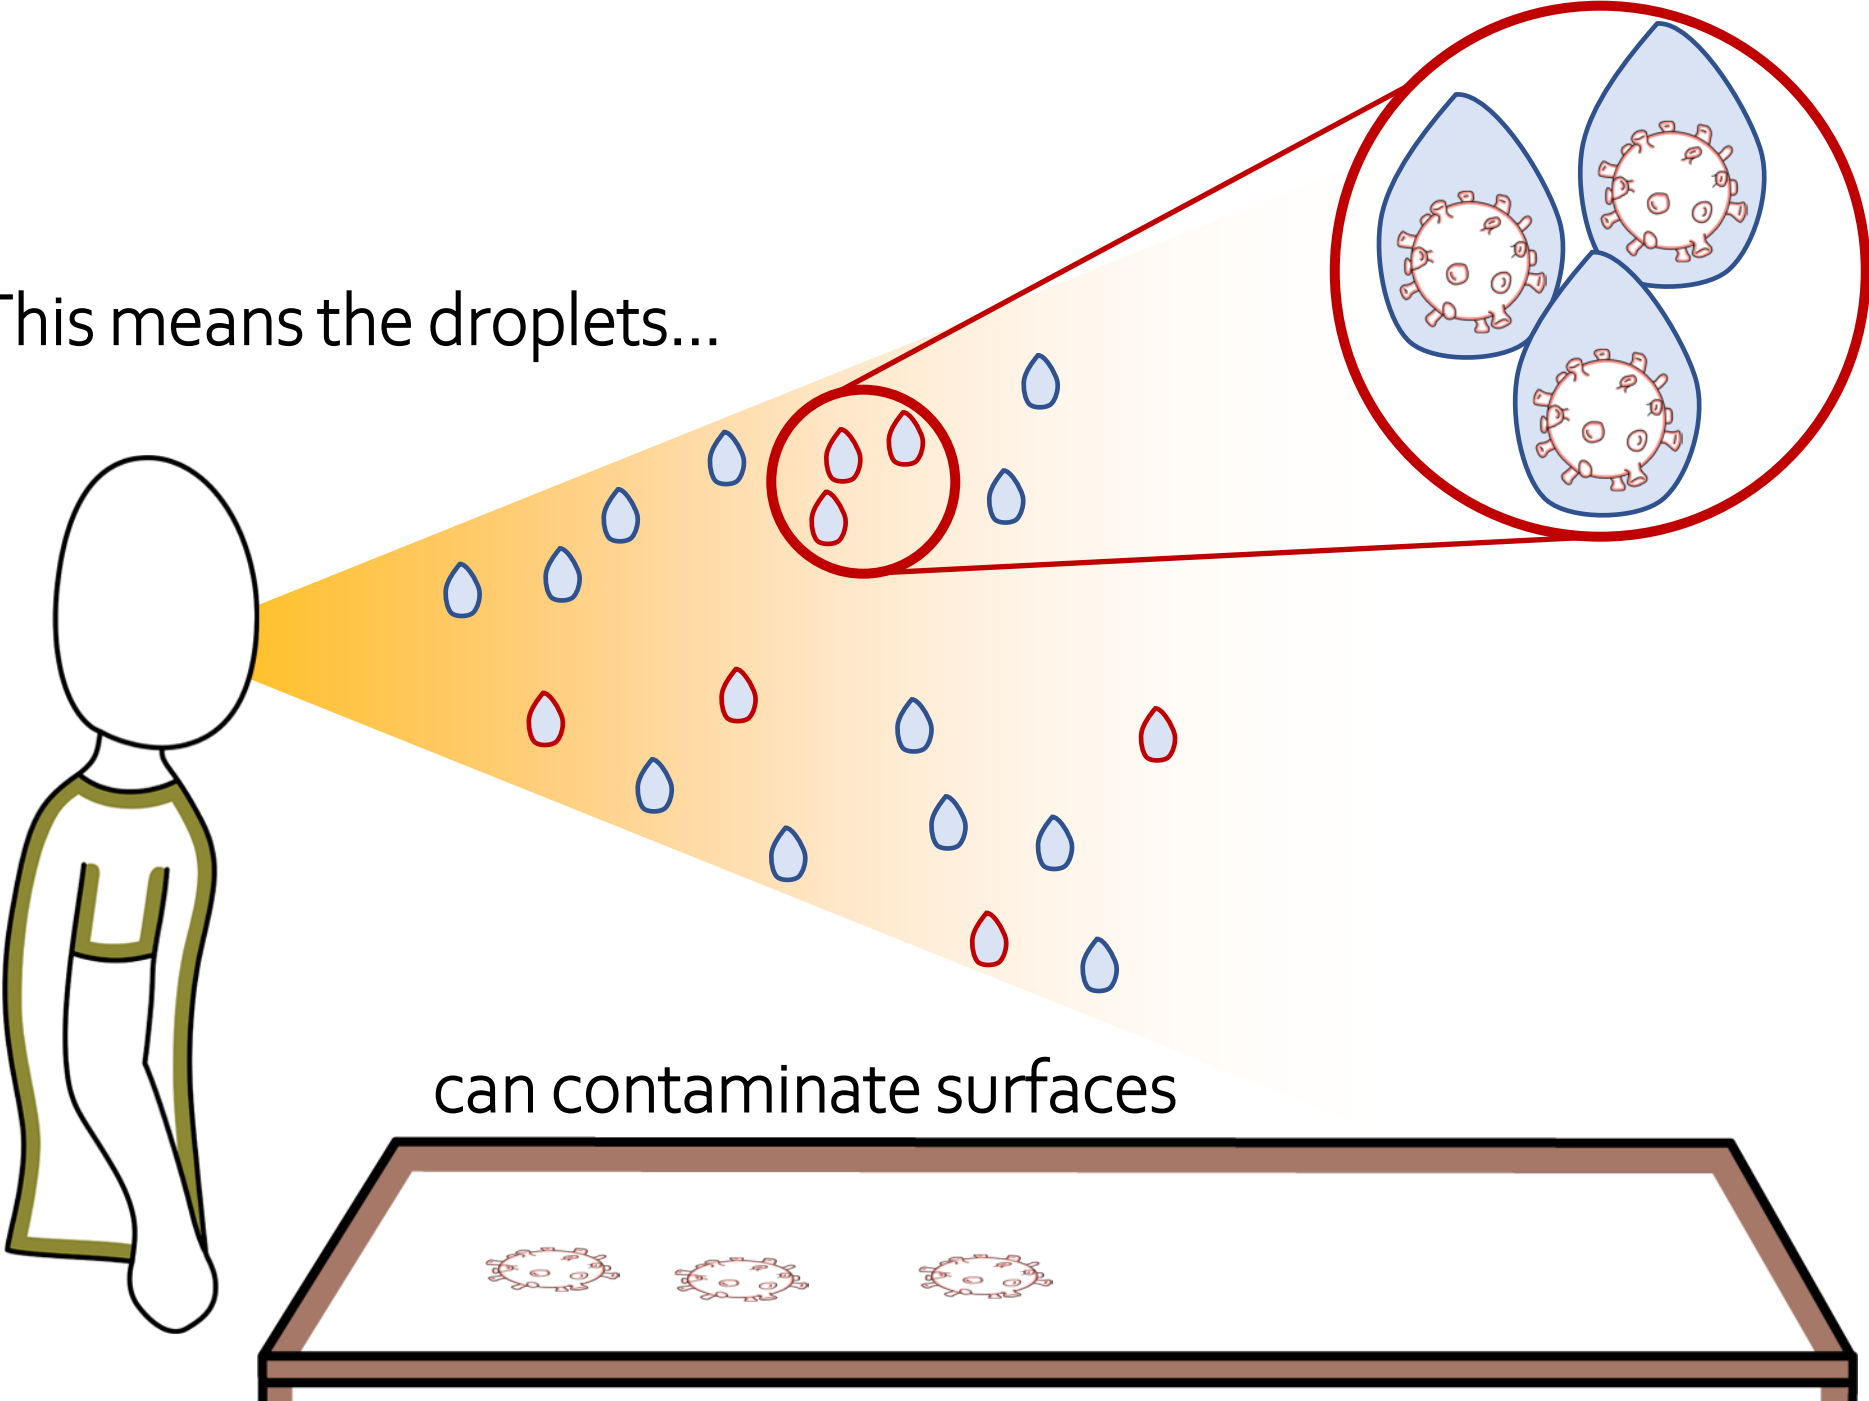

When someone has COVID-19...

the droplets...

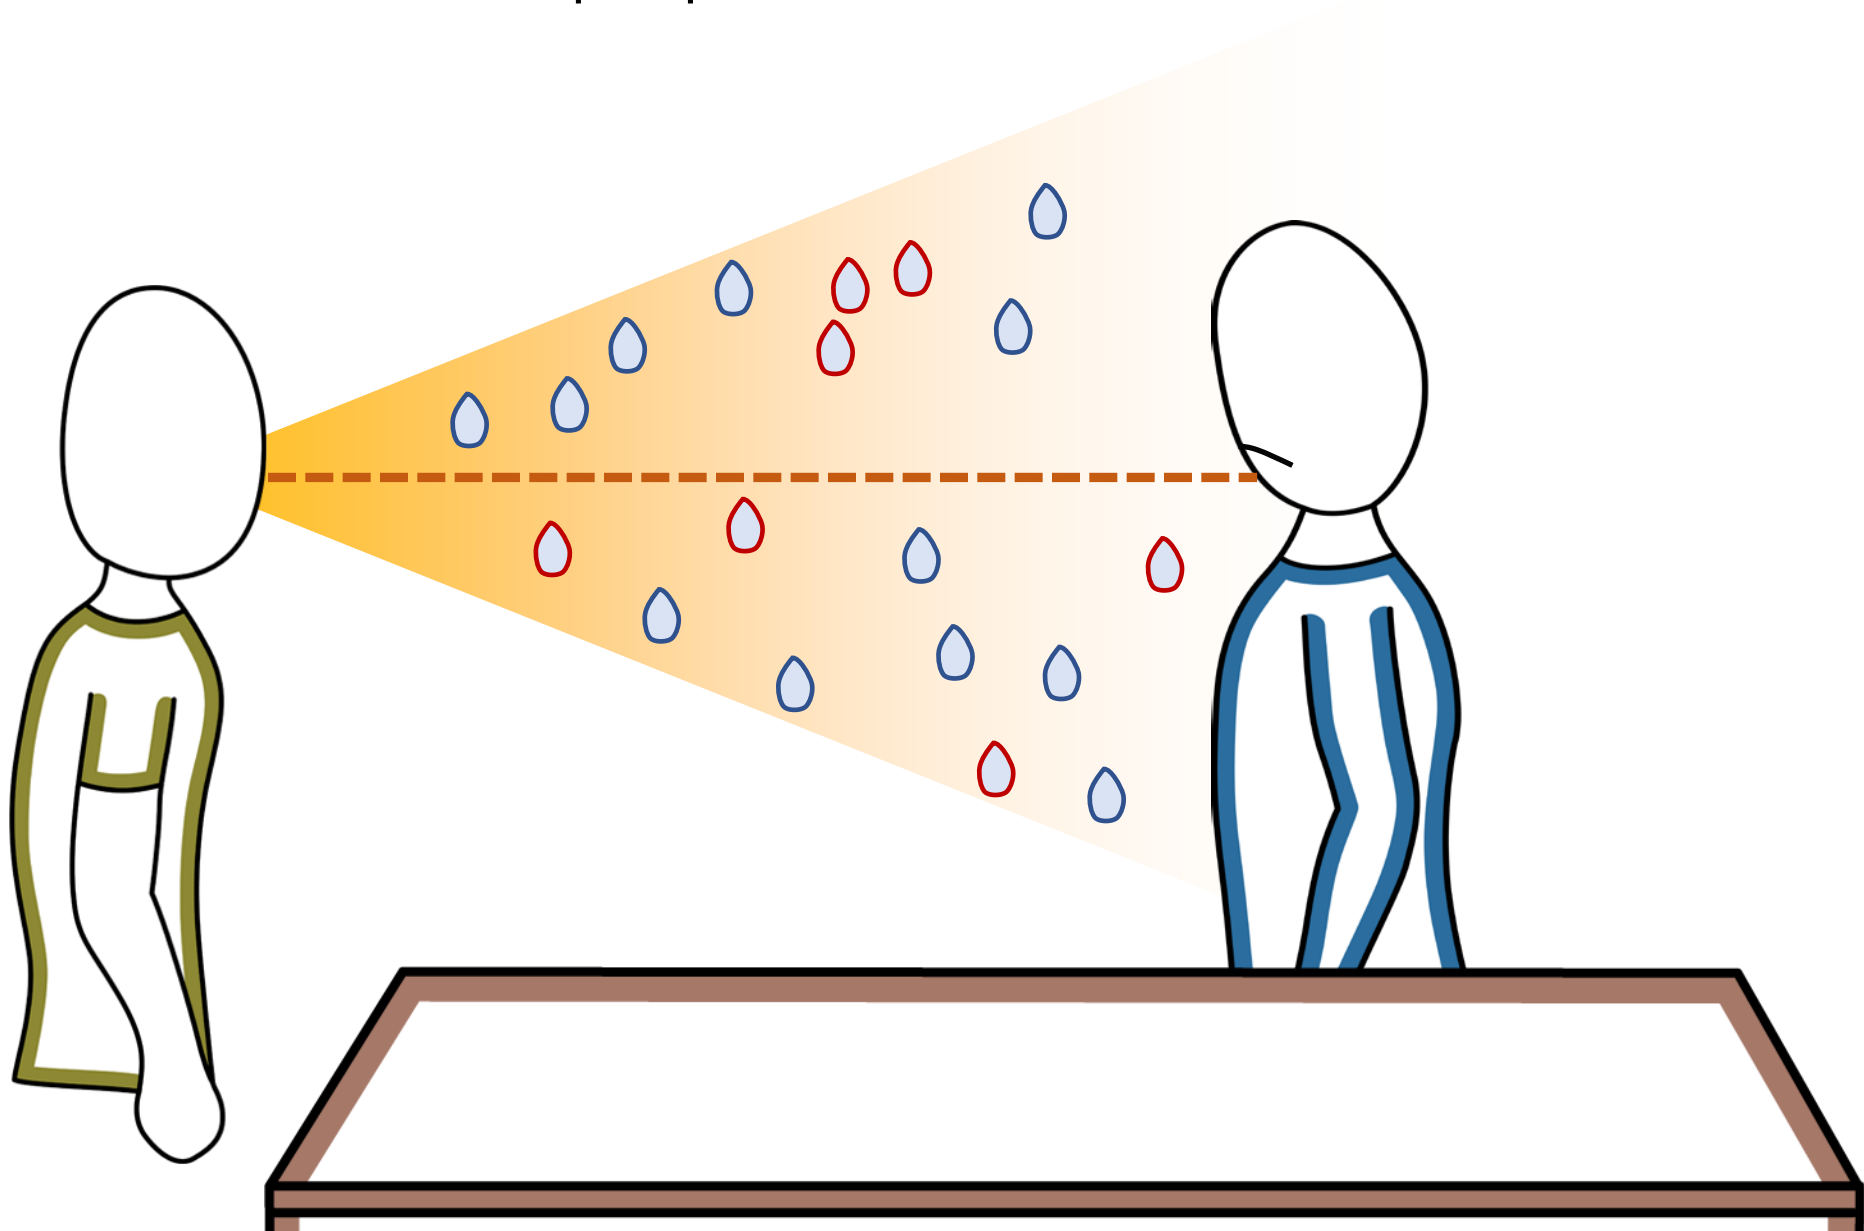

hold the virus

This means the droplets...

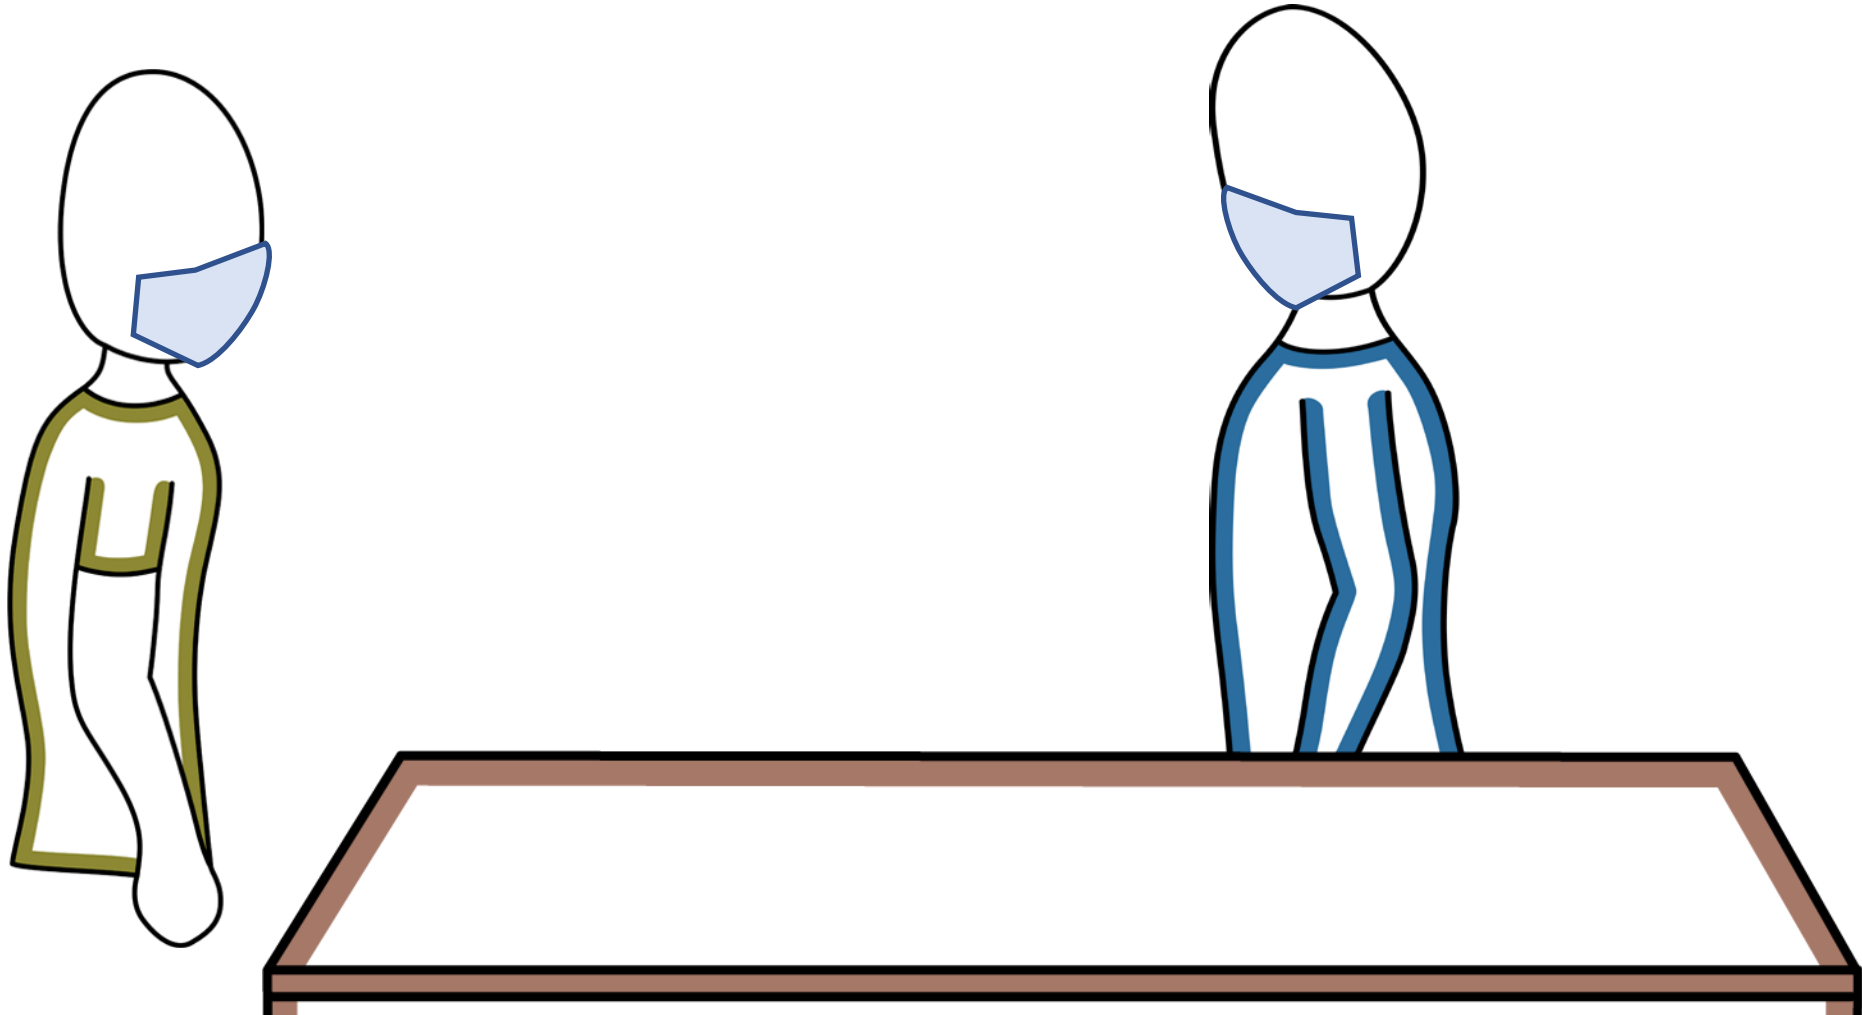

can contaminate surfaces

And people... who come within 6 feet.

This is why masks are important.

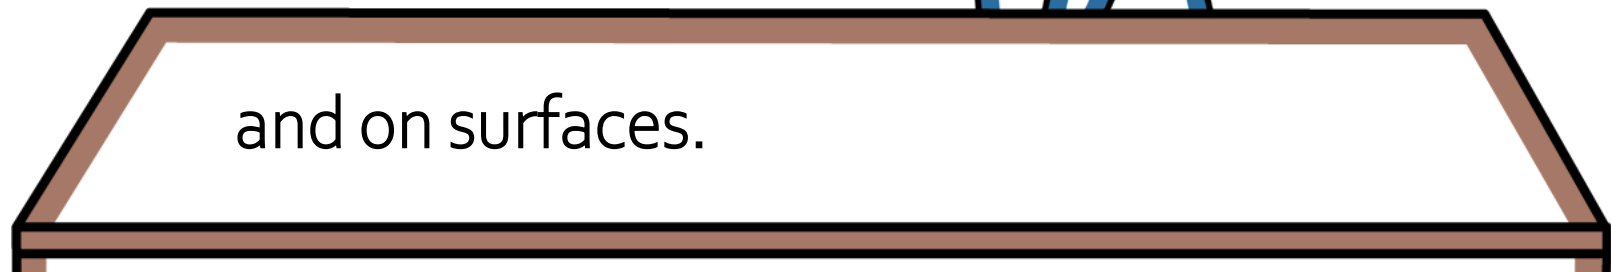

They help prevent the virus...

from spreading in the air...

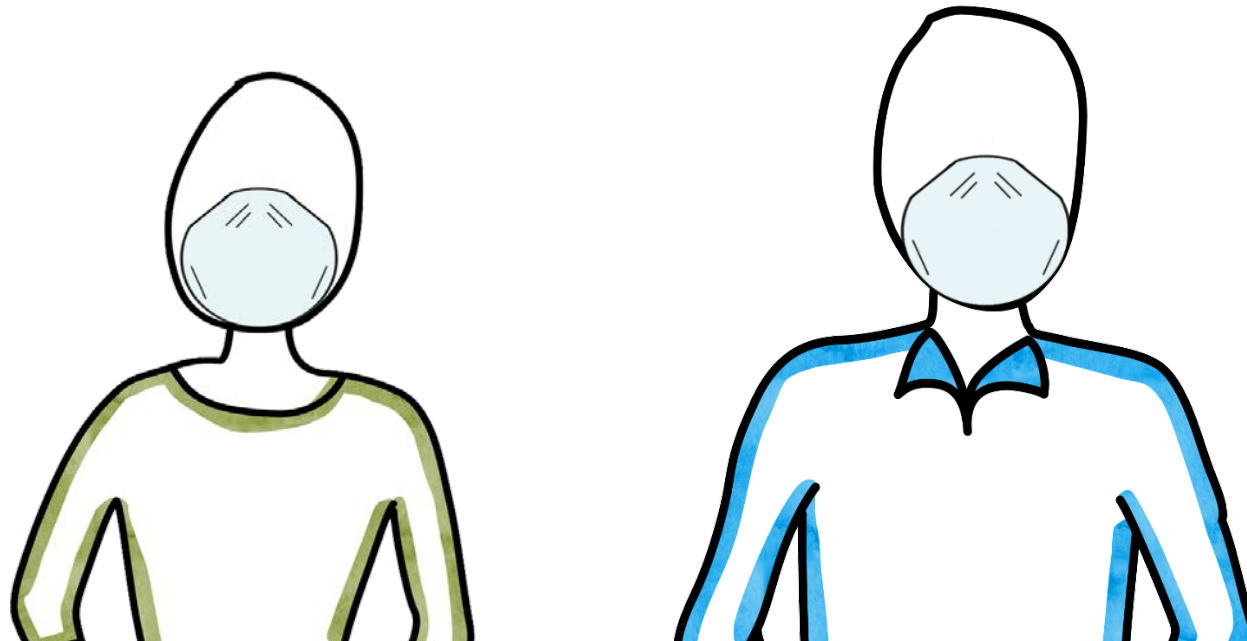

and on surfaces.

Please follow local guidelines.

Practice social distancing,
and wear masks responsibly.
