the state agency review period; therefore, the planner who worked on the project had nothing from them to add as a mitigation.

Subject: Trona Solar Plant - Renewable Energy Permit 2021-01

CAUTION: This email originated from outside of the Inyo County Network. DO NOT click links or open attachments unless you recognize and trust the sender. Contact information Services with questions or concerns.

Cathreen,

I was reading through the documents online regarding Renewable Energy Permit 2021-01/Barker Solar and CEQA addendum both reference a previously lapsed 2018 permit that contains the basis for the staff analysis and mitigation for the project. This was not included in the documents available online and I would like to request a copy of Initial Study and any other relevant documents that were publicly available at that time so that I may understand the permit that has been issued here.

From the CEQA Addendum.

"The ND prepared for the original renewable energy permit application, certified in July 2018, evaluated the project through an Initial Study (IS). The ISND identified several avoidance and minimization measures that were incorporated into project design, as conditions of approval for issuance of the permit, to avoid potentially significant impacts."

The "several avoidance and minimization features" and "potentially significant impacts" are not otherwise described in the current documents online.

Thanks,

John

John.

Attached is the original 2018 staff report and ISMND and the 2021 staff report. It was amended because the applicant increased the project area, but did not exceed the project footprint. The project also had to me amended because the applicant did not produce a reclamation plan in the required time. In other words, the 2021 project added solar panels into the area already evaluated by the original CEQA ISMND and provided the required reclamation plan.

So, a new ISMND was not required.

Gmell - Trona Solar Plant

Trona Solar Plant, which was forwarded to us by Matt Kingsley. Regarding the dust emissions, Luke Eisenhardt, one of our Air Quality Specialists, will be following up with the owner regarding the lack of dust mitigation measures, as well as a lack of the proper air district permit for the solar project. If you observe additional dust emissions impacting residences and/or crossing the property boundary please document them and let us know

Regarding your inquiry about expansion onto additional parcels, we at the sir district do not have any information about expansion at this time. Inyo County Planning, whom Matt also forwarded the small to, should be able to answer that question

Please contact Luke at leisenhardt@gbuspcd.org or 760-872-8211 ext 228 if you observe additional duel emissions from the project or have any other questions.

Thank you,

Ann Logan Deputy Air Pollution Control Officer Great Basin Unified Air Pollution Control District 157 Short Street Blehop, California 93614 (769) 672-6211 www.gbusped.org
